## Science - Summer 1.

-To be able to observe closely. -Identify and name a variety of plants, including deciduous and evergreen trees.

# What do plants need to grow?

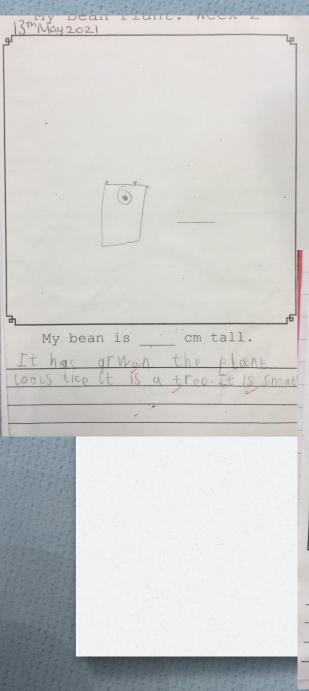

We started off by talking about what plants needed to grow and decided that they need: sunlight, water, soil and some other things like shelter and space to grow.

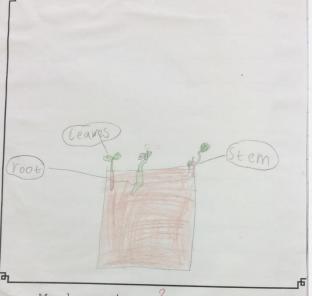

We planted garlic cloves and radish seeds for us to keep a diary of over the coming weeks.

What Do Plants Need. Equipment 7th May 2021 lancit Soile soil My Wotu-Woturgh can [3: 50y. Leon Fadisseels Sere air groots why? "That's how they get (Sglaric A plarnt pot Things Plants Need to Grow 19 Archie – Year 1.

We have been keeping weekly observations and exploring what stage of growth they are at. They started as seeds and then germinated before becoming little seedlings.

100 20th May 202

My bean is 2 cm tall. My seeds have dermination and now it is a seedling. I has three seedlings © You have made observations and recordings.

I think this is a sycamore leaf.

What tree is this leaf from?

awthan

One week we explored all of the different types of plants that we knew and another week we went on a tree hunt around our school field and used a sheet to tick off and identify the different trees around us.

## Checking how much they had grown. From this..

## To this!

#### FLE Y1/2

#### Plants

#### Our Endpoint

Our completed plant growth diary.

#### Forever Facts

All plants need water to grow. Without water, seeds and bulbs will not germinate.

All plants need light from the sun to grow well. Some plants need lots of sunlight and some plants only need a little sunlight.

Some plants like cooler temperatures and some plants like warmer temperatures.

Plants make their own food in their leaves using sunlight - this is called photosynthesis.

safety rules for carrying out

Spiritual: Show a sense of

Social: Understand the

need to be planted or cared for as it grows.

Garden plants are plants that people, choose to grow in their gardens.

A deciduous tree loses its leaves each year and an evergreen tree keeps its green leaves all year. round, even in the winter.

Subject Specific Vocabulary	
seed	A seed is the part of a plant that grows into a new plant.
germinate	When the conditions are right, the seed soaks up water and swells and the tiny new plant bursts out of its shell.
life cycle	A life cycle is a course of events that brings something into life.
bulb	A bulb is the part of a plant that grows into a new plant.
fruit	Fruit contains the plant's seeds.
diagram	A picture that helps someone to understand something.
prediction	a guess about what you think is going to happen
observation	seeing something and making notes about it
investigation	carrying out a careful search for answers to a question

#### Skills

Make observations, ask and answer questions. Carry out simple investigations and make predictions. Record in different ways including labelled diagrams. Begin to use scientific vocabulary.

Roots take in water and nutrients from the soil and keep the plant in the ground.

The stem holds the plant up and carries the water and nutrients from the roots to the leaves and the flowers.

When a plant sprouts, it grows new shoots. A shoot grows upwards from the seed or plant to find sunlight.

A wild plant seed grows where it falls. It does not
