

Science
Autumn 1 2022
Class Cremyll
Living things and their
habitats.

We worked in groups to sort objects into one of three categories. Dead, Living or Never Alive. We talked about our reasons for putting each item in each category.

“Just because you don’t see it move doesn’t mean it’s dead.”

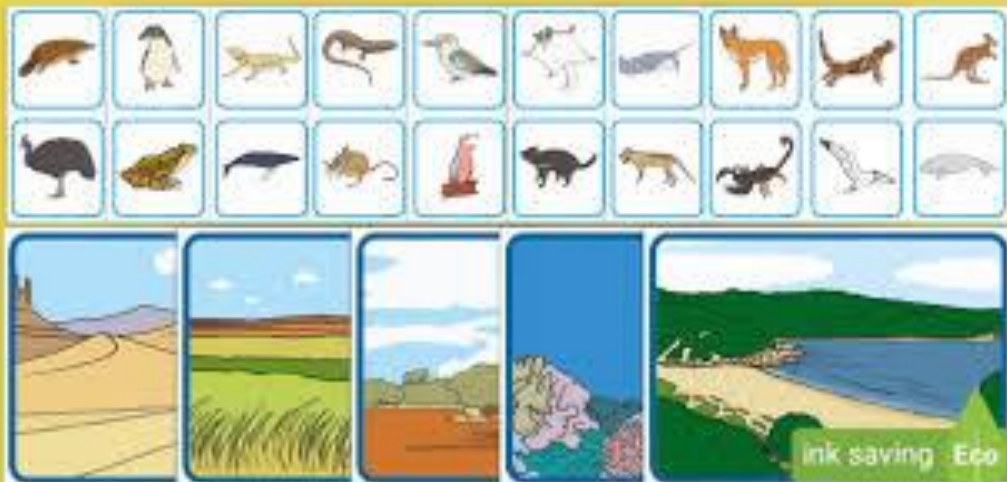

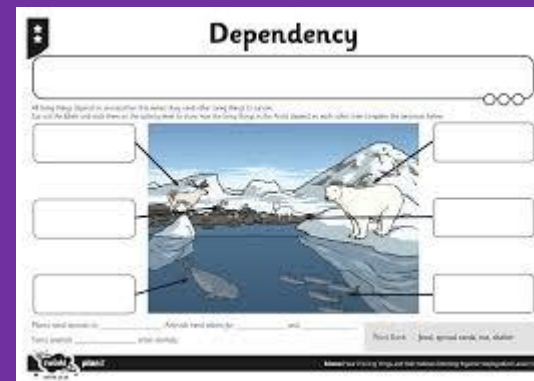

“If it’s alive and it stops growing, breathing and eating then it’s dead.”

Sorting animals into their correct habitat.
The children worked in pairs/small groups to sort different animals and plants into the correct habitat: Arctic, Tropical, Ocean or Desert by placing the pictures of different animals and plants onto pictures of the habitats.

For our next couple of lessons we looked more closely at the 4 main habitats and the creatures/plant life that live there. The class wrote sentences about the habitats and completed a habitat picture by adding captions.

Our Endpoint

To describe a habitat and the plants and animals that live in it.

Forever Facts

All living things need air, food and water in order for their basic needs to be met.

Some things have never been alive, for example, anything made from metal, plastic or stone.

Animals live in different habitats including oceans, deserts, Arctic, tropical and woodland.

What I have learnt before.

To make simple observations.

Personal development

Spiritual: Show a sense of enjoyment and fascination in our learning.

Moral: Understanding the consequences of our actions.

Social: Working together and demonstrating skills and attitudes that will allow them to contribute positively to life in Modern Britain.

Exciting books

Subject Specific Vocabulary

habitat	A place that an animal or plant lives which provides food, water and shelter.
survival	To continue to live.
microhabitat	A habitat which is very small.
minibeasts	A small animal like an insect or spider.
adaptation	Changes over time that enable a plant or animal to survive.
food chain	The order in which living things depend on each other for food.
predator	An animal that hunts other animals for food.
prey	An animal that is hunted or caught for food, usually by another animal.
dependency	Relying on another for help or to provide what you need.

Skills

Make observations, ask and answer questions.

Identify and classify.

Record in different ways including labelled diagrams.

Begin to use scientific vocabulary.
